

NGUYEN NGO THANH NHA

Backend Developer

OBJECTIVE

Back-end developer specializing in .NET (C#, ASP.NET Core), with nearly 2 years of real-world experience delivering enterprise ERP/CRM systems in the steel, seafood, aviation and HR domains, including bi-directional SAP integration.

EDUCATION

Software Engineering

FPT University
2021 – 05/2025
GPA: 3.2/4

TECHNICAL SKILLS

- **Programming Languages:** C#, JavaScript/TypeScript, T-SQL.
- **Library and Framework:** ASP.NET Core (Web API, MVC, Razor Page), Entity Framework Core, MediatR (CQRS), FluentValidation, AutoMapper, SignalR, Quartz.NET, NodeJS, ReactJS, TailwindCSS, Ant Design, Shadcn.
- **Database:** SQL Server (Stored Procedures), MySQL, PostgreSQL, MongoDB, Redis.
- **Integration:** SAP (REST/SOAP), Microsoft Graph API, Digital signature (VNPT SmartCA, CMC).
- **Tools:** Docker, Github.

EXPERIENCE

CITEK.ISD

03/2026 - Present

● VASG Sales Portal – B2B Steel Sales & Distribution System

TeamSize: 8 persons **Role:** Back-end (C#), Front-end (ReactJS)

Technologies: ASP.NET Core 8 (Distributed monolith), Entity Framework Core, MediatR (CQRS), SQL Server, Stored Procedures, Quartz.NET, SignalR, Serilog & Elasticsearch, EPPlus, Docker, GitHub Actions, ReactJS/TypeScript.

Description: A B2B sales portal for a steel manufacturing group, covering the full price-locked sales contract lifecycle — contract creation, multi-level approval, distributor ordering, billing and receivables — with bi-directional SAP integration.

Responsibilities:

- Owned the Sales Contract module: designed a multi-version contract model with per-distributor sub-contracts, remaining-tonnage calculation, and a pessimistic locking mechanism preventing concurrent price adjustments.
- Built bi-directional SAP integration for sales orders, sales contracts, pricing conditions, credit limits and accounts receivable, with idempotent writes, manual re-sync and status callback handling.
- Implemented the Price Approval Condition and Price Valid-To Adjustment workflows end-to-end (API + React UI), covering multi-level approval, split-price adjustment and Excel export.
- Developed the PreOrder module with an order-type rule engine (consignment return, gift and billet export orders) and channel-based tax calculation.
- Built Quartz.NET scheduled jobs (SAP sync, sub-contract auto-completion, lock sweeper, session cleanup) hosted as a Windows Service.
- Integrated VNPT SmartCA and CMC providers for digital contract signing, and set up GitHub Actions CI/CD to GHCR with Docker Compose and nginx deployment.

● MPS iCRM – Customer Relationship Management System (Maintenance & Enhancement)

TeamSize: 6 persons **Role:** Back-end (C#), Front-end (ReactJS)

Technologies: ASP.NET Core 8, Entity Framework Core, MediatR (CQRS), SQL Server, Hangfire, Quartz.NET, Microsoft Graph API, ReactJS/TypeScript, Ant Design; legacy ASP.NET MVC 5 and Entity Framework 6.

Description: Maintenance and enhancement of an internal CRM for a seafood export corporation, covering customer management, complaint handling, sample registration, shipping and trade-fair planning, and SAP-synced reporting.

Responsibilities:

- Delivered the Guest Schedule (meeting registration) module end-to-end — CQRS back-end features, React UI and SQL migrations — with two-level approval, a status-transition engine, unapproval requests and approval history.
- Integrated Microsoft Graph API to auto-create Teams meetings and sync approved schedules to Outlook calendars, including attendee management and cancellation propagation.
- Rebuilt the email-to-ticket pipeline for complaint handling: webhook-driven ticket creation, a de-duplicated background notification queue, and inline image extraction to file storage that significantly reduced database growth.
- Optimized search stored procedures and maintained legacy ASP.NET MVC / EF6 modules alongside the new .NET 8 API during an incremental migration.

ACHIEVEMENT

- Rocket Boost Entrepreneurial Competition Fall 2024.
- Excellent student at fall 2024

SOFT SKILLS

- Quickly integrate into the work environment.
- Willingness to explore and learn from new perspectives, expanding knowledge.
- Collaborating well within a team.

LANGUAGE

- English: Intermediate (Able to read and understand technical documentation)

Nam Phương Technology

12/2024 - 02/2026

VACS – In-flight Catering Delivery System

Team Size: 4 persons Role: Back-end (C#)

Technologies: ASP.NET Core, Entity Framework Core, Stored Procedures, SQL Server, Azure Cloud Services, EPPlus, Quartz.

Description: A centralized system managing in-flight catering supply operations for multiple airlines, integrating with external flight scheduling (Netlines) and equipment management (LMS) systems.

Responsibilities:

- Implemented RESTful APIs for 4 core supply modules (Meal,Beverage, Utensil, Linen), including quota configuration and auto-calculation based on passenger count and flight route groups.
- Integrated Netlines API for flight schedule sync and LMS API for equipment data to auto-populate delivery notes across modules.
- Developed multi-format Excel/PDF export for delivery notes per airline-specific templates.

CabinCrew – Uniform Warehouse Management System

Team Size: 2 persons Role: Back-end (C#)

Technologies: ASP.NET Core, Entity Framework Core, Stored Procedures, SQL Server, Azure Cloud Services, EPPlus, Quartz.

Description: A warehouse management system for tracking crew uniform inventory, covering import/export operations, quota configuration, and supply tracking per crew member.

Responsibilities:

- Sole back-end developer responsible for the entire system architecture across 8+ modules.
- Implemented quota management controlling uniform allocation per crew role and tracking replacement history.
- Built import/export workflows with full traceability by supplier and crew, including reason tracking and flight-based distribution logic.

NPP – HR & Project Management System

Team Size: 4 persons Role: Back-end (C#)

Technologies: ASP.NET Core, Entity Framework Core, Stored Procedures, SQL Server, Azure Cloud Services, EPPlus, Quartz.

Description: A centralized system for human resource and project management.

Responsibilities:

- Implemented APIs for Project, Task, Day-off, Timesheet, and Report modules.
- Integrated Microsoft Graph API for automated email notifications and workflow triggers.
- Developed timesheet tracking and day-off management features with approval workflow support. Built scheduled job system using Quartz.NET for automated reporting and reminder workflows.

PROJECTS

Solace SPA

01/2025 - 05/2025

Team Size: 4 persons Role: Back-end (C#)

Technologies: ASP.NET Core, Entity Framework Core, SignalR, MySQL, Redis, MongoDB, Docker Compose, GitHub Actions.

Description: An intelligent skincare application with built-in AI integration, featuring a dashboard for tracking skincare progress and an integrated chat system for expert consultations. It provides skin analysis and personalized treatment recommendations for both at-home and spa care, ensuring comprehensive and effective skin improvement.
